Capgemini- NetSuite Consultant (21 Dec 2022 - present)

- Working as a Senior Netsuite Consultant

Accenture - Senior Application Development Analyst (26 Dec 2019 - 19 Dec 2022)

- Worked as a Senior Netsuite Developer

Oracle Solutions Services (India) Pvt Ltd - Staff Consultant (8 October 2018 - 24 Dec 2019)

- Worked as a Staff Consultant (Technical Services Netsuite)

Happiest Minds Technologies, Bangalore- Software Engineer (19 December 2016 - 5 October 2018)

- Worked as a Senior Software Engineer (Netsuite)

Webbee Esolution, Noida - Associate Software Engineer (7 July 2015 - 14 December 2016)

- Started as a Software Engineer (Netsuite)

PROJECTS

Freelance NetSuite Application Engineer

Role: Freelance NetSuite Technical Lead

Responsibilities: Managing multiple NetSuite SuiteScript projects related to Suitelet, UI development, RESTLET, EDI Integration, Oauth 1.0 Integration, providing support and Bug fixes.

Netsuite SAP Integration Using Google Cloud Platform as a connector and Oauth 2.0

Role : Netsuite Developer

Responsibilities: Post Credit Memos to SAP System and get updates from SAP to NS. Completed work using RestLet for API and UserEvent script for posting credit memos when necessary approval was completed in NS. Data was posted to Google cloud platform API

Netsuite Salesforce Integration using Map Reduce, RestLet

Role: Netsuite Developer

Responsibilities: Replicate orders created in Salesforce back to Netsuite and sync order updates back to Salesforce using Map Reduce, running every 15 minutes.

Netsuite JIRA Integration using REST API

Role: Netsuite Developer

Responsibilities: Create Jira tickets based on Errors in Netsuite. Authentication using Basic auth and Backend using Map Reduce. Script was responsible for creating daily Jira Tickets based on errors in Netsuite. Integration was completed using the REST API.

Journal Entry Custom Approval Routing using SuiteScript

Role: Netsuite Developer

Responsibilities: Create two groups named Group1 and Group2. In each group there will be an approver and approver of approver. If members of group 1 create a journal entry it must be approved by the approver of group1. If a member of group 2 creates a journal entry it must be approved by the approver of group 2. If the approver himself creates a journal entry it must be approved by the approver. No person should be able to approve its own journal and the approver of group1 can't approve journals created by members of group 2 and vice versa. Also if a journal has a reversal entry it must be automatically approved if the journal of that reversal is approved. I implemented this project using user event script and client script.

WMS System

Role: Technical Consultant

Responsibilities: Working on warehouse management system bundle in Netsuite. Sometimes we need to create on top of what is already built based on customer demand.

Bug Fixing, Support and Enhancement work.

Add Custom Buttons, Modify Picking process, Create Labels, Modify the WMS Script Bundle Code according to customer needs.

WMS includes receiving, picking items, bin management, assigning items to bins, purchase order, sales order, packing item, shipping item etc.

Advanced Suitelet Form

Role: Netsuite Developer

Responsibilities:

Create an automatic resource allocation using the userevent script. The company works for solar panels and sells total megawatts to clients for a number of weeks. The logic was to divide megawatt equally for all the weeks in a matrix style with date and allocation name. After that a form needs to be created for editing MW on the UI. Users should be able to edit and save different versions of the form and also allocate mw to another week just by selecting a date. All fields should be editable in edit mode and non-editable in non edit mode. User can delete a row or add a new row to the table. All edits should not increase the total megawatts. At last each version of the form was to be attached with projects and an excel file was to be created to export the latest data in a matrix style.

User Registration, Login System & User Dashboard Using SSP, Suitelet

Role: Netsuite Developer

Responsibilities: The company uses Netsuite to manage its business process. The company has no direct buy-now option but it has requested a quote option. When a user requested a quote I was responsible for creating a lead, prospect or customer in Netsuite along with contact. Quotation raised by the customer was to be converted into an estimate or sales order and an automated email was to be sent to the sales rep. Customers can register and login and see the quotation they raised previously in PDF form. It was implemented using SSP and Suitelets.

WooCommerce Connector

Role: PHP Developer

Responsibilities: Create woocommerce endpoint and expose it for consumption via API. Expose order, item, customer, and other details via API

SuiteHello.Com

Role: React Developer

Responsibilities: Developed a Portfolio website using React Js and pure javascript.
